ASSEMBLY:

❶ Slide the c-channel on one side of the pegboard. Do it three times.

**❷** Join the panels to one another to form a complete triangle. Make sure to align carefully for best results.

❸ Align and place the tower on the included revolving base and snap in the pusher screws in place.

❹ Place the top cap and secure with self tapping screws. Use phillips screw driver to easily thread screws through top of pegboard plastic (there are no pilot holes on pegboard). Finally adhere the t-strip to top cap.
