

# LED Panel Lighting with Arms

Specially designed for attachment to acrylic, plexiglass, and wooden display panels, these LED Light Bars feature two adjustable arms and an aluminum LED strip. Compatible with all DW Panels, each light bar comes with a 12V transformer. The lighting's daylight temperature of 5700K-6500K provides optimal retail illumination, making your eyewear products stand out.

With a slim profile and adjustable light angle, the wires are completely concealed within the arms for a clean look. This innovative lighting solution, designed and manufactured exclusively by our company, is not available commercially elsewhere. It's a simple plug-and-play installation, with instructions and an acrylic template provided for drilling two small holes.

With an incredible lifespan of 50,000 hours (17-22 years), we also offer custom lengths upon request to perfectly match your panels.
